January 1977

WORLD POULTRY MEAT AND EGG PRODUCTION
FORECAST TO INCREASE AGAIN IN 1977

Outlook for 1977

Preliminary forecasts of poultry meat production in 1977 in 38 of the world's leading producing nations indicate that total production will rise 3-4 percent. However, the increase varies by type of poultry. Turkey meat is forecast to decline 2 percent, while production of others--especially broilers and fowl--is expected to expand.

Higher production is indicated in all regions, with the smallest increase in North America because of an estimated 6 percent decline in turkey production in the United States. However, this decrease follows an approximate 15 percent boost in turkey production in the United States in 1976. The European Community (EC) is forecast to have 4 percent growth in production to 3.5 million tons, with the expansion relatively balanced among the poultry meats.

Egg production for the 38 major producing countries is forecast to increase 2 percent, double the 1976 increase. A relatively balanced growth is expected, with all regions showing gains.

World trade in both poultry meats and eggs and egg products is forecast to advance over 1976 volumes, but the gain will not be of the same magnitude as in 1976. While various markets are projected to expand their imports, the Middle East market again may show the largest volume of increase.

Poultry Meat Supply in 1976

Poultry meat production in the 38 producing countries in 1976 is estimated at 15.8 million tons, 7.5 percent above 1975 production. Production increases occurred in most types of poultry meat and for most countries. Broiler output, which accounts for approximately two-thirds of total poultry meat production, is estimated to have increased 10 percent above the 1975 level to more than 10.4 million tons.

Reviewing a slightly smaller list (25) of countries, turkey meat--which comprises about 10 percent of the total--rose by almost 13 percent over that produced in 1975. Production of meats from fowl and meats from poultry other than chickens is estimated to have declined slightly during 1976 from 1975 levels.

In 1976 approximately 5.4 million tons of poultry meat were produced in the United States--slightly over one-third of total production in the 38 countries. Of U.S. production, 76 percent was in broilers, 6 percent fowl, 17 percent turkey, and less than 1 percent in other poultry. The United States produces 40 percent of the broilers grown in the countries reviewed and 58 percent of the turkeys. Conversely, it produces only 15 percent of the fowl, and 4 percent of the other poultry in these countries.

With U.S. exports of 156,500 tons of poultry meat reported through November 1976, exports for the year are estimated at 170,000 tons. There were especially large increases in whole broiler exports--more than four times those of 1975--because of larger exports to traditional markets and the rapidly expanding Middle Eastern markets, such as Iraq. Chicken parts, turkey, and fowl exports are also estimated to increase over the 1975 levels--approximately 53; 38 and 250 percent respectively.

Production of poultry meat in Western Europe is estimated to have increased almost 8 percent to 4.4 million tons in 1976. Of that total, EC output will approximate 3.3 million tons, 7 percent above the 1975 level. Italy, France, and the United Kingdom continue in their positions as the top three producers within the EC.

Output in Spain, the largest non-EC producer in Western Europe and third after Italy and France, is estimated at 700,000 tons in 1976, an increase of 11 percent. Almost 90 percent of Spain's production of poultry meat is broilers. The country is the largest broiler producer in Europe and the third largest in the world. EC countries are important in world trade, even though over two-thirds of their trade is intra-EC.

The USSR's production of poultry meat has fluctuated in recent years. Drought forced output somewhat higher in 1975, with augmented slaughter in that year, and lower in 1976 as flocks were not restored to their earlier levels until late in the year.

The only segment that may not show a decline in 1976 is broilers, but they comprise a very small part--11-14 percent--of total production. The growth rates of poultry output in the East European countries vary greatly, with some--such as Poland, Hungary, and Romania--indicating large increases (15-25 percent) while others are posting gains of around 5 percent.

Other larger poultry producers estimated to have had increases in 1976 are Japan and Canada (12 percent), and Brazil (8 percent), to reach production levels of 842,000 tons, 456,000 tons, and 414,000 tons, respectively. Japan and Canada were net importers of poultry in 1976. However, Brazil, whose broiler industry has expanded rapidly in the past decade, has started to export in recent years and may become a sizable trader. Approximately 25,000 tons were exported in 1976.

Egg Supply in 1976

Egg production in 1976 in the 38 countries is estimated to have reached 306 billion eggs, about 1 percent above estimated output in 1975. The United States and EC countries each produce about 21 percent of the total, with the USSR and Japan following with 18 and 10 percent, respectively.

Output in other regions reflects different growth factors. Certain countries in South America have evidenced lower production, as does the USSR. North America and the EC indicate growth of less than 1 percent, but with an estimated 9 percent increase for Spain, estimates for all of Western Europe--including the EC countries--are for an increase of 1.9 percent. Eastern Europe had a 3 percent growth, and Asia and Oceania--with Japan representing about 80 percent of the production--estimated a 7 percent gain.

With international trade in eggs and egg products expanding, overall trade patterns indicate that the EC is a slight net exporter, but Western Europe in total, including the EC, is a slight net importer. The larger net exporters are the East European countries, the United States, Australia, South Africa, and Israel. Outside of Western Europe, the major net importers are Japan, Hong Kong, the USSR, and Canada.

Major Countries

UNITED STATES: Broiler production in the United States during the first three quarters of 1976 was 14 percent above that of the comparable 1975 period. Production for the year is estimated at 4.1 million tons, 13 percent over that of 1975.

Turkey production saw a 19 percent jump for the first 9 months of 1976, compared with the same months of 1975, but the fourth quarter is estimated to have had a much smaller gain so that the annual increase will approximate 14 percent. High output has caused stocks to rise and prices to stay relatively low. Poult placements indicate that production in the first half of 1977 will be slightly lower than during the comparable 1976 period.

In spite of slightly lower mixed feed prices, returns to U.S. poultry producers were declining in the second half of 1976 compared with those of the same period of 1975 as the availability of poultry and other meats rose and prices for poultry fell.

U.S. exports of poultry meats rose substantially in 1976 compared with 1975 levels. The biggest growth was in broilers, but all categories had increases. This expansion resulted from larger sales to traditional U.S. markets such as Canada and Japan and to some of the rapidly growing Middle Eastern markets.

U.S. egg production is estimated to have increased slightly--0.5 percent--in 1976 over the 1975 level. A slightly higher rate of lay held output above that of the previous year as the number of layers decreased fractionally. Placements indicate that the number of layers may rise in 1977, and, if rate of lay continues rising, a production gain of 2 percent could be envisioned.

EUROPEAN COMMUNITY: Poultry meat production in the EC is estimated to have increased 7 percent in 1976 over the 1975 level. Each EC country indicated higher output, ranging from 2 percent in Belgium-Luxembourg to 10 percent in the United Kingdom. Turkey meat is estimated up 12 percent and broilers up 7 percent over 1975 levels.

EC poultry meat imports in 1976 are estimated at 343,000 tons and exports at 435,000 tons, which represents 61 percent and 54 percent, respectively, of the world trade of the countries reviewed. EC countries obtained 81 percent of their imports from other Community countries, while EC exporters sold 66 percent of their shipments within the Community. Germany was the largest importer with 80 percent of EC imports, while the Netherlands was the largest EC exporter with 55 percent of total EC exports. EC countries also export to other West European countries, the Middle East, Far East, and the USSR, among others.

CHANGES IN EC GATE PRICES AND LEVIES: New gate prices and variable levies were set on November 1, 1976 (gate prices and variable levies are set quarterly). Gate prices were increased about 1 percent but variable levies were reduced about 6 percent from the August 1 level when considered in EC units of account. However, in terms of equivalent U.S. cents per pound in Germany, gate prices increased about 8 percent and variable levies about 1 percent from the August 1 level because of the appreciation of the German currency vis-a-vis the EC unit of account and the U.S. dollar.

Supplementary levies, which may be changed at any time to equalize the difference between import offer prices and gate prices, remained the same on November 1 as on August 1 in terms of units of account, but increased around 8 percent in equivalent cents per pound in Germany. However, since November 1 (effective December 6, 1976) supplementary levies have been increased in units of account (with equivalent cents per pound in Germany in parentheses) from zero to 40 (23.8) on turkey halves and quarters, from 30 (17.8) to 35 (20.8) on turkey drumsticks, and from 45 (26.7) to 55 (32.7) on turkey thighs. These increases brought the ad valorem equivalent of total import charges (variable levies, supplementary levies, and monetary compensatory amounts) to 139 percent for hindquarters, 119 percent for drumsticks, and 102 percent for thighs.

CANADA: Total poultry meat production in Canada is estimated to have increased about 12 percent in 1976 compared with that of 1975. Much of the increase was accounted for by a 15 percent rise in broiler output. Turkey production is estimated as increasing 7 percent over 1975's volume. There is expected to be no change in the production of fowl and other poultry meat over 1975 levels.

A large percentage of Canada's poultry imports originate in the United States. U.S. exports of poultry meats to Canada in the first 11 months of 1976 soared above shipments in the comparable months of 1975. Exports of broilers through November were 4,600 tons--2.5 times 1975's level--and fowl at 5,800 tons and turkey at 5,000 tons were quadruple the previous year's level. Poultry meat availability in Canada was 7 percent higher than in 1975.

Production and stocks of eggs in Canada decreased in 1976 by 2 percent and 16 percent, respectively.

Imports of table eggs and egg products into Canada are controlled by the Canadian Government, which has set an annual global quota of 36 million table eggs. However, if domestic needs are not satisfied through domestic production and the quota level, supplemental import licenses can be requested from the Department of Industry, Trade, and Commerce, which can certify that the eggs are not available through the Canadian Egg Marketing Agency (CEMA).

In 1976, table egg imports are estimated at 90 million (79.9 million had been imported as of November 27--all were from the United States). Estimated 1976 imports of table eggs were 29 percent higher over 1975's. Total egg imports, including hatching eggs and egg products are estimated at 228 million eggs and egg equivalent, a 5 percent increase over total imports in 1975. However, as a result of lower production, the total supply of eggs in Canada in 1976 was estimated to be down 2 percent.

JAPAN: Poultry meat production in Japan is estimated to have increased 12 percent in 1976 over 1975 output. This gain results from an approximate 15 percent increase in broiler outturns, as production of all other poultry meats declined slightly. The large increase in broiler production was based on a recovery in demand, the higher profitability in 1975, and somewhat lower mixed feed prices in 1976.

Imports in 1976 were larger than in 1975, and the United States gained a larger share of the expanded market. U.S. exports of broilers and turkeys to Japan in the first 11 months of 1976 were double, fowl more than triple, and other poultry meat more than quintuple over shipments in the same months of 1975. With the larger availability, both consumption and stocks increased.

Japan, the third largest egg producer in the world, saw a substantial increase in its output of eggs during 1976. The increase, estimated at 9 percent, occurred against the recent background of slowly decreasing per capita consumption and Government programs to limit production. With the larger egg supply, the Livestock Industry Promotion Corporation--a quasi-Governmental organization in charge of wholesale price maintenance for certain dairy products, pork, and beef--will subsidize the storage and breaking expenses of the newly constructed egg breaking facilities of the Association of Egg Producers, Wholesalers, and Farmer Cooperatives. This group was formed several years ago to attempt to maintain the market price of eggs. The breaking capacity is not large; approximately 4,000 tons of liquid eggs were expected to come under the support program during 1976.

BRAZIL: Broiler output, which comprises 90 percent of total poultry meat production and consumption, has been expanding very rapidly in the last decade in Brazil and many predict that it will continue expanding nearly as rapidly in the coming years. Production during 1976 was more than double the 1968-72 average. The most rapid expansion is in the southern states, where corn and soybean production are expanding.

Most of the poultry from the older establishments (near the population centers) is chilled chicken for immediate sale, but the newer facilities are producing frozen chicken, a part of which supplements the chilled consumption locally, a part of which moves into the Northeast, Amazon, and

interior regions, where commercial poultry is scarce, and a part of which is moving into export. Exports of broilers, which have started in the last 2 years, were expected to approximate 25,000 tons in 1976 and, depending on completion of port facilities, could reach as much as 40,000-60,000 tons in 1977 or 1978.

Egg production and consumption, which have been relatively static in Brazil during recent years, should show a slight increase in 1976. The egg industry is based on smaller holdings, and distribution is not country-wide. Some note that when viewing per capita consumption, instead of considering 100 percent of the population as a "market," 30 to 40 percent should be used as a "reachable market," i.e., having the disposable income to purchase the product and having a distribution system to move the product to market.

MIDDLE EAST--IRAN: The poultry industry in Iran may be illustrative of that industry in several countries of the Middle East, with the domestic industries and consumption growing rapidly and the governments encouraging this growth. In Iran, production of poultry meat has risen from about 82,000 tons in 1973 to an estimated 135,000 tons in 1976. In the same years, egg production rose from 79,000 tons (1 metric ton equals 16,855 eggs) to an estimated 130,000 tons. Both of these industries are forecast to expand even more rapidly as new plants open in 1977 and 1978. Imports of hatching eggs and day-old chicks as well as feedstuffs and production equipment are important adjuncts to this expansion.

Imports of poultry meats and eggs are also expanding--even more rapidly than domestic production. In the 4-year span noted above, imports into Iran of poultry meat rose from approximately 3,000 tons to an estimated 55,000 tons and eggs from a reported 1,000 tons to an estimated 30,000 tons.

Import sources vary for the different countries and commodities, but poultry meat has largely been from West European countries and eggs from West and East European countries. The United States shipped only small quantities of poultry meat and eggs to these countries until 1976, when larger sales were made to several Middle East countries, with the largest--about 35,000 tons--to Iraq, a neighbor of Iran. Many in the industry expect exports into this area to be excellent for the next few years and, while less certain, are optimistic over sales prospects after that. As with any rapid import expansion, logistical problems of timing of the unloading of shipments, internal transportation, etc., need be considered by potential exporters to these markets.

April 1977

U.S. POULTRY AND EGG EXPORTS AT RECORD HIGH IN 1976

The United States in 1976 again increased its standing as one of the world's largest net exporters of poultry and eggs. Exports soared and imports declined, and Canada repeated as the largest U.S. poultry and egg export market.

The value of U.S. exports of live poultry, poultry meat, and eggs and egg products reached \$251.4 million in 1976—64 percent larger than in 1975 and almost 3 times the 1969-73 average value. Poultry meat exports, at \$180.6 million, accounted for 72 percent of the total export value.

Eggs (including egg products) and live poultry (mostly baby chicks) made up 15 percent and 13 percent of the total value, respectively. Chicken meat exports led the increase with a gain of 89 percent, while exports of eggs and live poultry were up around 19 and 26 percent, respectively, over the previous year's exports.

U.S. imports of poultry and eggs and their products declined 8 percent from a total value of \$7.45 million in 1975 to \$6.84 million in 1976. A small increase in poultry meat imports was more than offset by declines in imports of live poultry and eggs. Live poultry remained the largest category of imports, followed by eggs and poultry meat.

Canada and France were the largest exporters to the United States, supplying 67 percent and 14 percent, respectively, of all U.S. poultry and egg imports in 1976. Canada supplied much of the live poultry and shell eggs, while France supplied almost all of the U.S. liver paste imports.

The destinations for U.S. exports are varied. In 1975 the top five markets—Canada, Japan, West Germany, Hong Kong, and the United Kingdom—received 57 percent of U.S. poultry exports. In 1976, even with the very large shipments of U.S. broilers to Iraq for the first time and an almost doubling of exports to Canada and Hong Kong, shipments to the top five represented only 59 percent of total shipments—a clear indication of the development of new and traditional markets around the world. The 1976 ranking was Canada, Japan, Iraq, Hong Kong, and West Germany. As indicated in the accompanying tables,

exports to many other markets grew—Singapore and Mexico moved from \$5 - million to \$7 - million markets, Switzerland doubled to more than \$4 million, and Nigeria quintupled to more than \$3 million.

Poultry Meat

Of the poultry meat exported in 1976, 70 percent was chicken meat; 22 percent was turkey meat; 6.3 percent was other fresh or frozen poultry, poultry livers, and poultry specialties; and 1.7 percent was canned poultry. By far the most important export item was broilers, with a total export value of \$115.9 million. Of this amount, parts accounted for \$66.3 million and whole birds for \$49.6 million.

Although broiler parts continued to be the biggest seller in 1976, whole broilers showed the sharpest increase, jumping from \$9.7 million in 1975 to \$49.6 in 1976—more than a fivefold gain. The principal reason for this increase was a sale of whole broilers to Iraq valued at \$28.6 million—more than half of all U.S. whole broiler exports in 1976.

Other substantial importers of whole broilers from the United States were Canada, Mexico, and Venezuela. The principal importers of broiler parts from the United States were Japan, Hong Kong, Singapore, and Jamaica—with these four countries importing 69 percent of the total exported in 1976. There were strong gains to Canada and Saudi Arabia as well.

Considering total broiler exports—parts and whole—the Far East continued to be the largest importer, but the Middle East was the fastest growing market—again, largely because of the sale to Iraq. Whereas exports to the Far East in 1976 increased 56 percent, sales to the Middle East were almost 23 times greater than the small base of 1975 and this area replaced North American countries as the second largest area import market for broilers. Of the North American countries, Canada, Jamaica, and Mexico

were the largest broiler importers from the United States, with the Leeward and Windward Islands and Bermuda following in order of importance.

Exports of fowl increased two and one-half times to more than \$10 million as exports to Canada, at \$6.3 million, and to Japan, at \$2.3 million, almost quadrupled.

Turkey meat exports registered a healthy 33 percent increase in value in 1976. The total export value in 1976 of \$39.8 million was comprised of 69 percent parts and 31 percent whole birds. West Germany continued to be the principal market for turkey parts, while Canada replaced Italy as the largest importer of whole turkey. On a combined value basis, Germany, with a 10 percent increase, remained by far the largest importer. Canada, which saw imports triple, was the second largest market, followed by the United Kingdom and Italy. Hong Kong and Japan each exceeded \$1 million in 1976 as exports to these countries increased by 50 percent or more.

Import duties imposed on uncooked products by the EC have been a strong deterrent to larger sales of uncooked turkey and turkey parts to the EC countries. In 1976, turkey exports to the EC countries grew by only 4 percent. An example of the impact of the import duties is that the dollar equivalent of total import charges into Germany (including variable levies, supplementary levies, and monetary compensatory amounts) during the year, in cents per pound, ranged between 9 and 18 on whole turkey, 12 and 36 on turkey halves and quarters, 20 and 28 on turkey breasts, 19 and 31 on turkey drumsticks, and between 24 and 50 on turkey thighs.

The ad valorem equivalent of these import charges (based on the delivered price of U.S. turkeys) ranged in 1976 between 18 and 31 percent on whole turkey, 26 and 32 percent on turkey breasts, 60 and 127 percent on turkey drumsticks, and between 51 and 101 percent on turkey thighs. Most of the variation in import charges is the result of changes in the supplementary levy, which is designed to equalize the offer price on imported poultry with the gate (minimum import) price and may be changed with only 3 days' advance notice.

Exports of other poultry meats and canned poultry meat each increased over 70 percent to \$7.1 and \$3.0 million, respectively. Large increases to Canada and the Leeward-Windward Islands led the gain in both categories, as well as a large increase to Japan for other poultry meats.

Eggs and Egg Products

The export value of eggs and egg products in 1976 totaled \$36.9 million, up 19 percent from the previous year's level but only 15 percent of the total value of all poultry and egg exports. Within the egg group, shell eggs were by far the most important item, with an export value of \$32 million—87 percent of the export value of all eggs and egg products. By value, three-fourths of shell egg exports was for hatching, with the remainder for consumption.

Canada was the largest importer of U.S. hatching eggs, taking about 50 percent of the U.S. exports. Other

substantial importers in order of importance were Jamaica, Italy, Trinidad-Tobago, Dominican Republic, and Guyana. The combined imports of the above countries accounted for 86 percent of the value of U.S. exports of eggs for hatching. Canada and Hong Kong were the largest importers of U.S. eggs for consumption, with 73 percent of U.S. exports.

Contrary to the trend of other poultry items, exports of egg products (dried, frozen, or preserved) were 41 percent lower in 1976 than in the previous year. The principal reason for the decrease was that exports to Japan dropped from \$4 million in 1975 to \$300,000 in 1976. Canada, Sweden, and Hong Kong showed increases.

Live Poultry

Live poultry exports, at \$31.3 million in 1976, were 26 percent larger than in 1975 and represented 13 percent of all poultry and egg exports. Of the \$31.3 million, 72 percent—\$22.6 million—was baby chicks. Turkey poult made up less than 3 percent, with the remaining 25 percent consisting of other live poultry. The principal importers of baby chicks were Canada, Japan, Brazil, Mexico, and Spain, with 44 percent of the total. However, as indicated by the five nations representing less than half of the exports, exports of baby chicks were quite widely distributed throughout the world.

Imports

U.S. imports of live poultry, poultry products, eggs and egg products, with a total value of \$6.8 million in 1976, were 8 percent less than in 1975 and 34 percent less than in 1974. Increased imports of poultry meat (the smallest category of imports) were more than offset by decreases in egg and egg products and live poultry. The groups of imports in order of importance were: live poultry, \$3.0 million; eggs, \$2.1 million; and poultry meat \$1.7 million. Canada supplied 97 percent of all live poultry imports (mostly baby chicks) and 45 percent of the shell eggs. Other important suppliers of shell eggs were the People's Republic of China, Mexico, Taiwan, Hong Kong, and Israel, (in the category of "other," on the table). Egg imports from the countries of the Far East are preserved shell eggs, while those from Mexico and Israel entered for breaking. France and Canada supplied 52 and 43 percent, respectively, of poultry meat imports. All of the imports from France were liver paste, while imports from Canada consisted of poultry meat, fresh or frozen, and prepared or preserved.

Outlook for 1977

Exports of poultry, eggs, and their products are expected to rise, but they will be affected by the varying levels of expansion in the economies of the recipient countries, foreign exchange availability, etc., and with competition from other protein sources. Also, tariff and nontariff barriers have and are expected to continue hampering

trade. Chicken meat, especially broilers, is expected to show the greater volume growth, with almost all categories witnessing an increase.

During the first 2 months of 1977, the value of poultry and egg exports totaled \$39.5 million, a 15 percent increase over the \$34.2 million exported during the first 2 months of 1976. Of the above 1977 value, \$28.3 million was from poultry meat, \$6.6 million from eggs and egg products, and \$4.6 million from live poultry, representing increases of 21 percent and 14 percent, respectively, for poultry meat and eggs, but a 9 percent decrease for live poultry.

Of the poultry meat exports, chicken meat was up 71 percent, whereas turkey meat was down 62 percent. The largest increases occurred in the Lebanon and the Persian Gulf area, up 317 percent; Hong Kong, up 71 percent; Singapore, up 62 percent; and Japan, up 48 percent. The decline in turkey exports occurred largely in those to Germany, with additional declines for the U.K.

In general, the United States increased its exports—mostly broilers—to all areas outside Europe, but

lost ground in Europe. U.S. export prices have been competitive with EC prices in the Middle East, Far East, and Caribbean—even with EC export subsidies ranging around 56.5 cents per pound (depending on the country). But with the subsidies up on April 15 from 8.5 to 12 units of account per 100 kilograms (around 78.7 cents per pound) the relative competitiveness of U.S. poultry could be eroded. Also, continued high import charges on uncooked turkey parts to Germany (40 cents per pound on thighs, 35 cents on drumsticks, 29 cents on halves and quarters, and 27 cents on breasts) may be expected to affect adversely U.S. sales of turkey parts (the principal export item) to Germany.

Total U.S. exports of poultry and eggs in 1977 are expected to exceed the 1976 level; however, the exact level will depend on the interaction of a large number of variables.

WORLD POULTRY MEAT AND EGG PRODUCTION
TO INCREASE AGAIN IN 1977

Outlook for 1977

Forecasts of 1977 poultry meat production in 38 of the world's leading producing countries indicate that overall output will increase about 5 percent above that of 1976 and 11 percent over that of 1975. However, the increases by type of meat will not be equal, as turkey production is expected to remain approximately the same as in 1976, while broiler and other chicken meat will have increases above the 5 percent level.

Higher output is predicted for all regions. North America's production will increase for chicken meat, with the greatest growth in broilers. Turkey output, following the 13 percent increase in 1976 over the 1975 level, will see a slight decline in 1977. A 3.5 percent increase in poultry meat production is predicted for the European Community (EC) during 1977, with all countries but Ireland showing increases and the United Kingdom the largest growth--almost 6 percent.

Although broilers will lead the increase, stable or higher production is forecast for all types of poultry meat. Output in the other countries of Western Europe, led by Spain, should show increases of almost 6 percent. The East European countries are forecast to continue their production growth with a 5 percent increase expected in 1977, while the USSR should recover about three-fourth of the 20 percent decline in 1976 and reach 1.4 million tons.

Slaughter of broilers in the USSR will continue expanding rapidly, but the much larger component of their poultry meat production--spent laying hens--may not expand to any great extent as layer flocks are being rebuilt.

The other larger poultry meat producers--Japan, South Africa, and Australia--are expected to have increases of approximately 6, 6, and 2 percent, respectively--approximately one-half of their 1976 increases.

Egg outturns in the major producing countries are forecast to increase approximately 2.5 percent in 1977. U.S. and Japanese production is each projected to increase a little over 1 percent each, but a 6 percent increase is forecast for the USSR as it more than recovers from the drop in

1976 and strong gains in Spain and Brazil are expected to raise the total. Decreases can be expected in France, Australia, Hungary, and a few other countries.

International trade in these items in 1977 is forecast to increase over that in 1976, but the rise may not be as large. Greater movement is foreseen to a number of markets, but the largest gains may again be to the Middle Eastern countries.

Poultry Meat Production in 1976

Poultry meat production for 1976 in the 38 producing countries approximated 15.8 million tons, 6.5 percent above 1975's production. While this is a decrease from earlier estimates--primarily in the United States, France, Italy, Spain, and the USSR--all of these countries except the USSR had increases over 1975 levels. Gains were seen in most other countries and for most types of poultry produced in them. Broiler output, which comprises two-thirds of total poultry meat production, is estimated at 10.4 million tons, 10 percent above the 1975 level.

Turkey meat output, which represents slightly over 10 percent of total poultry meat production, is estimated to have risen 12 percent during 1976 in 25 countries that comprise the larger turkey producers. The United States, which produces nearly 60 percent of the turkey meat, had an increase of slightly over 13 percent. France, the U.K., and Italy--the next three largest producers--had growth rates of between 12 and 15 percent. Almost all the countries reviewed had increases in 1976.

Production of meat from fowl and from other poultry each decreased, but in both cases the declines came from drops in output in the USSR. The small increase in the other producing countries did not offset the USSR decrease.

Approximately 5.4 million tons of poultry meat were produced in 1976 in the United States, about 35 percent of the total in the countries surveyed. Broilers comprise two-thirds of the world's poultry meat production, but more than 76 percent of the U.S. output. The remaining U.S. production consists of turkey, 17 percent; fowl, 6 percent; and other poultry meat, 1 percent. The United States produces almost 40 percent of the broilers and 58 percent of the turkeys in the countries reviewed. Conversely, production of fowl and other poultry in the United States represents only 15 and 4 percent, respectively, of the total output in the countries reviewed.

The United States exported approximately 195,000 tons of poultry meat in 1976--including live birds for slaughter with a computed ready-to-cook weight of about 10,000 tons. This was nearly double the 1975 export level. A 50 percent increase in chicken parts--the largest single category of exports--and a quintupling of whole broilers--over half of which moved to Iraq--led the advance. Turkey exports, which rose 38 percent, and fowl exports, which more than doubled, reinforced the export increase.

Poultry meat production in Western Europe increased approximately 6.5 percent to 4.3 million tons in 1976. Of that, EC countries produced about 3.3 million tons, up 5.5 percent from the 1975 level. Italy, France, and the U.K.

were the top three producers in the EC. The U.K., with a 10 percent increase, and West Germany, with an 8 percent gain, were the fastest growing EC producers. Even though about two-thirds of their trade is with each other, countries of the EC are very important in international trade. Indications are that in 1976 intra-EC trade may have declined slightly, but trade with non-EC countries--especially in the Mideast--may have compensated for the decrease.

Production in Spain, the largest producer in non-EC Western Europe and the third largest in Western Europe, is estimated at 685,000 tons for 1976, a gain of about 8.5 percent over 1975 production. Broiler production, which comprises about 90 percent of total output in Spain thus causing Spain to be the largest European broiler producer, had a similar gain. Portugal and Greece had the largest percentage increases of the West European countries reviewed.

East European countries are estimated to have increased output in 1976, ranging from about 4 percent in some countries to almost 30 percent in others. While production increased in some of the exporting countries--such as Hungary and Romania--exports may not have increased, or at least not to the same extent as output, because of expanded consumption within the producing countries.

Smaller supplies from its traditional suppliers in Eastern Europe, plus the large (20 percent) decrease in USSR production caused the Soviets to import poultry from Denmark, the Netherlands, Belgium, the United States, and possibly other Western countries during 1976. There was almost a complete recovery in the number of birds in the USSR by the end of 1976; however, because the distress slaughter in late 1975 and early 1976 had reduced layer flocks, slaughter from the layer flocks was lower in 1976 and will remain below the 1975 level until late in 1977.

Japan, Canada, and Brazil--large producers of poultry meat--each had sizable increases--11 percent, 13 percent, and 8 percent, respectively--in 1976. Of these, Japan and Canada are net importers and their imports are also estimated to have risen substantially in 1976. Brazil, a newcomer to the export area, saw a little over 5 percent of its 414,000 tons of poultry meat production exported. Recent and future expansion in output is expected to permit both domestic consumption and exports to increase.

Egg Supply in 1976

Production of eggs in 1976 in the 38 countries reviewed is indicated to be about 303.5 billion eggs, slightly below 1975 estimated output. The major producers continued to be the United States (21 percent), the EC (21 percent), the USSR (18 percent), and Japan (10 percent). Preliminary information indicates that Japan and the United States had increases in output (up 4 percent and 0.7 percent, respectively), while the EC and the USSR had decreases (down 0.8 percent and 4.6 percent, respectively).

While most countries had only minor changes from their 1975 production, some, like Portugal (+40 percent), Spain (+9 percent), and Romania (+8 percent), or Argentina (-16 percent), had more drastic movements. Regional output varied accordingly, with production in North America, Western Europe, Asia, and Oceania increasing slightly, while output in the USSR and South America declined.

International trade in eggs and egg products appears to have increased again in 1976. Some of the principal net importers are Japan, Hong Kong, the USSR, and Canada. While the EC is a slight net exporter, inclusion of the other countries of Western Europe causes the entire area to be a minor net importer. The major net exporters continue to be the East European countries, the United States, Australia, South Africa, and Israel.
